Website · LinkedIn · GitHub

I’m a software engineer at Booking.com. I build shared AI-assisted engineering workflows, help colleagues put the tools to practical use, and work across Java backend systems and full-stack development. I started coding to make games for my Spanish students.

Engineering experience

Booking.com · Software Engineer I

November 2024–present

- Co-led practical AI workshops and supported colleagues through demonstrations, written guidance and troubleshooting.
- Built reusable AI-assisted investigation and testing workflows, with fixtures derived from current dependency models rather than hardcoded assumptions.
- Delivered Java backend and React/TypeScript changes for travel recommendations and customer-facing content.
- Traced missing destination data to a customer-facing copy issue, implemented a targeted fix, and validated existing scenarios while documenting the wider dependency problem.
- Contributed code and configuration cleanup while preserving active behaviour, and refined the shared process with teammates.

Toptal · Full Stack Engineer

September 2023–October 2024 · Progressed from intern to junior developer

- Built internal marketing tools across Next.js/TypeScript interfaces, backend APIs and PostgreSQL, using Prisma to access application data.
- Integrated BigQuery data into application workflows and developed monitoring and workflow-automation features with stakeholders.
- Introduced recorded walkthroughs for pull requests and tickets to share implementation context.

Technical skills

Engineering practice: AI-assisted workflows, practical knowledge sharing, debugging, testing, incremental delivery and technical documentation.

Languages and web: Java, JavaScript, TypeScript, HTML, CSS; React, Next.js, Vue.

Data and APIs: PostgreSQL, Prisma, BigQuery, backend API development.

Teaching and earlier experience

CodeOp · Teaching Assistant · 2023–2025

Supported students with programming concepts, debugging and project work, offering practical guidance and feedback during workshops and coding sessions.

Online Spanish Tutor · 2016–2023

Taught Spanish online and began building browser games in 2019 for young learners, adapting activities in response to their requests.

Freelance web work · 2018–2019

Built WordPress websites for clients.

LearnEasy24 · Product Manager · 2016–2018

Supported platform development and launch through testing, bug reporting, UX work and communication with developers.

Earlier personal projects

Bocaditos de Español · Historical project

Classroom games were my starting point in software: I built activities with HTML, CSS and JavaScript, tried them with students and improved them from their feedback. A later Next.js application explores learning through songs, translations and listening practice. Source

Scoutly · Past project

I built a Next.js app to explore how AI could help with job discovery. It gathered openings from company career pages, compared them with a candidate's profile, and saved matches for review, with tracking for AI usage and estimated costs. I no longer use or maintain it. Source

Education

Full Stack Development Bootcamp
CodeOp · 2023

Master's Degree in Applied Linguistics for Teaching Spanish as a Foreign Language
Universidad Europea del Atlántico · 2018–2021

Bachelor's Degree in Physiotherapy
Universidad Arturo Michelena · 2011–2016

Languages

Spanish · English · Dutch — basic
